Youkol Car

Youkol Car is a software product based on patented Youkol technology. Youkol Car reduces risks related to the use of cellular phones and, in particular, the risk of loss of concentration while driving.

How does it work?

Youkol Car automatically recognizes the car's infotainment system (or other predefined devices) and automatically pairs with it.

The driver's phone screen is turned off to avoid driver's phone manipulation.

All communication functionalities are now available exclusively through the car's infotainment system. Phone calls cannot be routed from the car's infotainment system to the phone or to earphones\headset.

100% Software Based
Youkol Car is 100% software based and does not require any dedicated hardware, while still being able to collaborate with any device connectable to the phone, such as car multimedia systems and handsfree sets.

Data & Insights
Youkol Car provides full access, through dashboards and data flows, into critical user events and behaviors while driving. Events like policy status changes, engagement with the screen, or phone call presence are all reported upstream while maintaining strict privacy protocols.

App Agnostic
Youkol Car is completely app agnostic and is not affected by other applications, even if these make use of the phone's sound channels and screen. This unique patented feature ensures high performance and consistency over time, given that Youkol Car takes priority over existing or emerging applications.

Simple & Affordable
No learning curve. Youkol Car is transparent to the driver. Thanks to its purely software nature, Youkol Car does not need, unlike other safety systems, any dedicated and expensive hardware.

Competitive Edge
Strong IP portfolio which includes patents for Youkol's exclusive technology in the EU, USA and Israel, as well as proprietary software and extensive know-how.
Flexible API and Easy Integration
Youkol offers a rich and flexible API. Youkol's technology can be implemented in a variety of ways with a very small footprint, including as a standalone app or into online services and/or ancillary apps.

Youkol Products Range
Youkol products include, in addition to Youkol Car, a wide range of products for 2, 3 and 4-wheelers and for pedestrians' safety. Youkol is well attuned to smart mobility trends such as ADAS, PAYD, OEMs, aftermarket devices, new safety regulations, insurance digitization, ESG and, also, reduction of exposure to EM radiation.
